

Step 1

Select your location or region and press **OK**.

Step 2

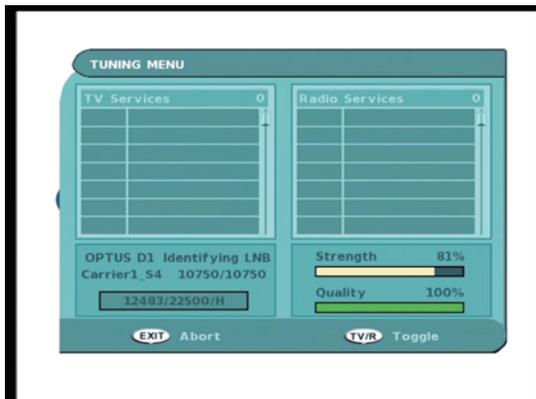

Select **Yes** when asked do you want to scan.

Step 3

The equipment attached to the satellite dish will be detected and the signal strength and quality bars will be shown.

The channel scan will automatically begin once the signal is found.

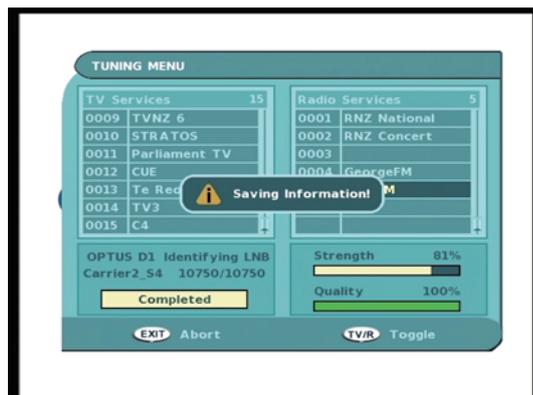

Step 4

The channels found will be shown. The process can take a few minutes so please wait until the search is completed.

Step 5

Once all the channels are found the receiver will save the channels and exit automatically. You can begin watching television.

Troubleshooting

If you get a "Tuning Failed" or "Database Empty" message, please try the following:

- 1) Check your connections to the satellite dish.
- 2) Ensure your dish is correctly installed.
- 3) Retry installation after performing "Factory Default"
